# Arti lunghi per arrampicarsi!

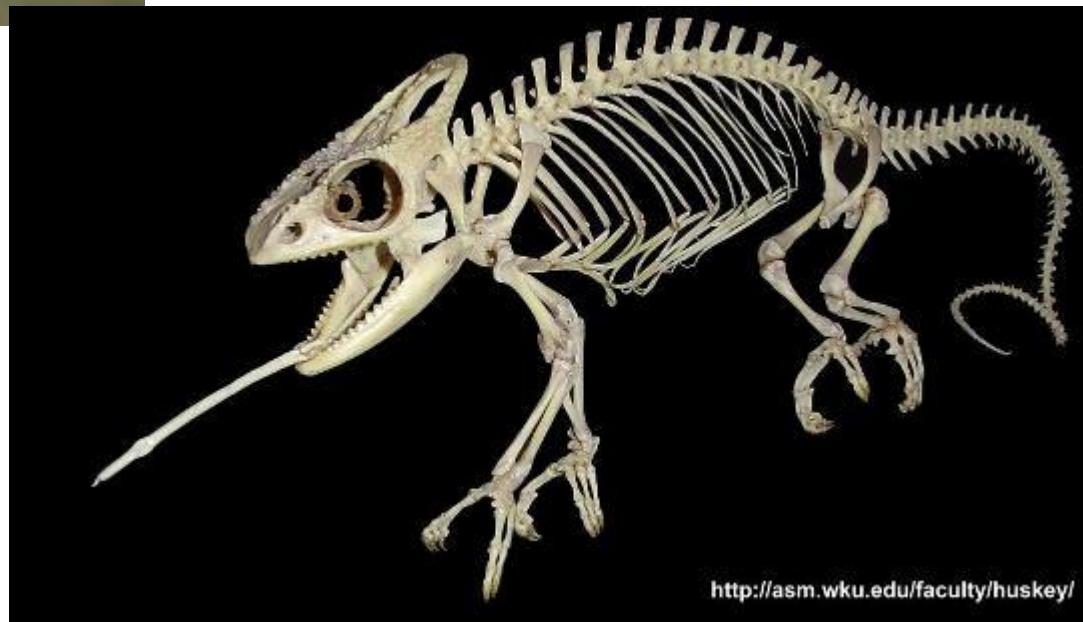

dreaminfire.com

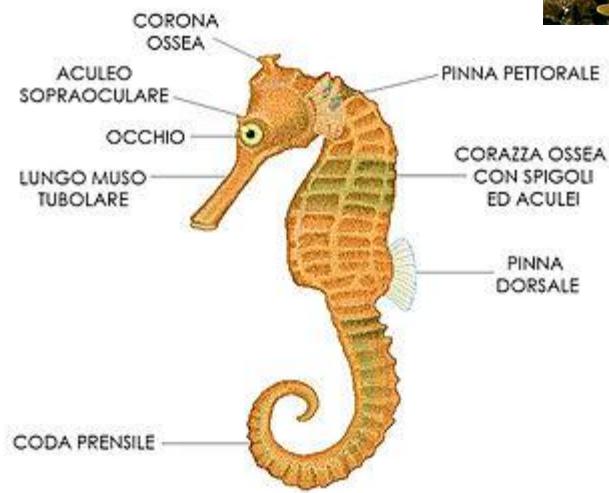

Arti lunghi, ma nell'uomo tendono poi ad accorciarsi,  
quando smette di arrampicarsi...

# La coda può servire!

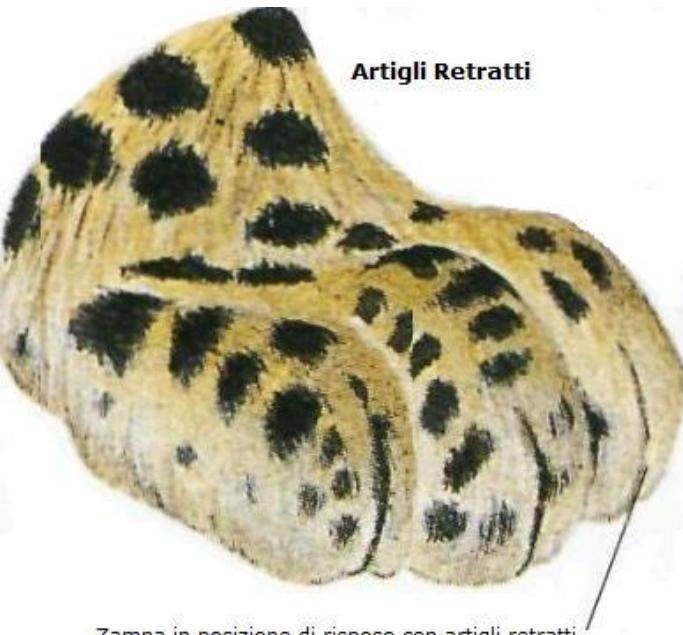

# Dita con artigli

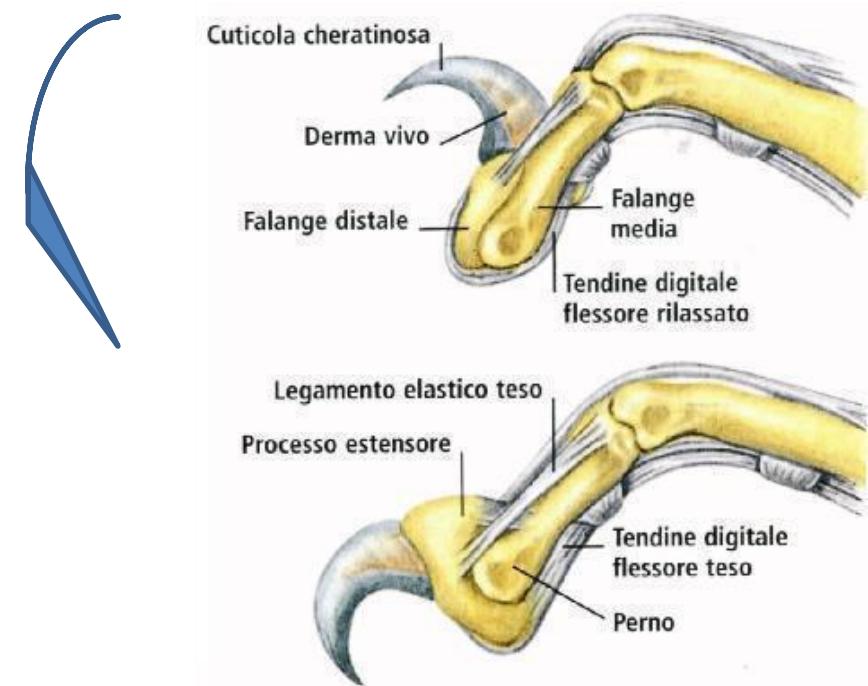

Zampa in posizione di risposo con artigli retratti.

I legamenti si rilassano per lasciare uscire gli artigli quando e' necessario.

Artigli anche come offesa...poi possono servire anche per arrampicarsi...
